

SAFETY MEETING TOPIC

This form shall be completed and kept on file

Job Name _____ Location _____ Job No. _____
Meeting Leader _____ Title _____
Date Held _____ Place _____ Time _____
Subject of Meeting ELECTRICAL TESTING EQUIPMENT

Every electrician and apprentice should carry an electrical tester at all times while on the job.

Everything electrical should be checked, to make sure it is deenergized before proceeding.
Use your common sense in the application of this safety requirement.

Meggers, amp-probes, electric meters, etc. should be kept in a place that is safe from damage so that when they are needed they will give proper readings.

A portable battery operated tester is easy to carry and use to test that equipment grounds are in place on electrically operated tools, etc.

If using a multi tester be sure that it is properly set for the intended application.

A few extra minutes and some forethought can protect against injury, and perhaps even death.

Use the equipment intended for your own safety, as well as the safety of others.
